

BAIA CU EVO 4/25 WG

4% cymoxanil/
25% copper oxychloride
wetable granules (WG)

DESCRIPTION

FUNGICIDE AGAINST DOWNY MILDEW

Mixture of two fungicides, a locally systemic (cymoxanil) and a contact one (copper oxychloride) with preventive and therapeutic effects against mildew in vine, tomatoes and potatoes crops.

APPLICATIONS

- The applications are preventive if conditions are favorable for the development of mildew or in accordance with agricultural warnings.
- BAIA Cu EVO 4/25 WG should not be applied if rain or frost are expected or when plants are shocked. In case of rain in less than two hours after application, the efficacy of the formulation can be reduced and it is recommended to reapply.
- It should not be applied to crops that are in stress due to lack or excess of water, low temperatures, insect infestations, malnutrition or other factors that reduce crop growth.

ADVANTAGES

- It contains substances that belong to different chemical groups, with the aim of increased efficiency.
- The combination of two active substances reduces the likelihood of developing resistance to the pathogen, in one of the two active substances.
- Wide range of activity (use also in tree and extensive crops (see label)).

PACKING

- ✍ 500gr
- ✍ 1250gr
- ✍ 2500gr

** The items listed herein are informational and do not in any way substitute the instructions indicated on the label.
